

# NEW PRODUCT LAUNCH

## 4H175E ELECTRIC PAEDIATRIC COT RELEASE!

This new addition to our product line has been designed with attention to both paediatric care and caregiver convenience, ensuring that we meet the highest standards in acute settings.

It includes a built-in oxygen cylinder storage rack and two spacious storage baskets underneath as standard features.

### Features & Benefits

**Easy-to-Operate Side Rails:** With a design focused on simplicity, the side rails can be managed with just one hand, bolstering patient safety, and enabling caregivers to make quick adjustments even when multitasking.

**All-Around Access:** The open base design of our cot ensures unrestricted access from all sides, facilitating comprehensive patient care and minimising the risk of care-related injuries.

**Height Customisation:** Electric hi/low functionality allows for seamless height adjustments, catering to a variety of care needs and enhancing the comfort of patients while providing convenience for caregivers.

**Emergency-Ready Positioning:** The cot features an integrated Trendelenburg function, allowing swift tilting up to +12 degrees.

**Note:** this is designed for emergencies, not as an emergency position. For a stable emergency position, use the manual release lever to return the platform to flat instantly. Integrated

**Battery Backup System:** Ensures uninterrupted operation during power outages for height and tilt adjustments. It is not meant for extended cordless use, but it ensures consistent patient care in all settings.
